CSR Partnership Radar · Components Map

MESA Problem 9-2. Live news is read every day, scored in plain code and emailed to Ananya on Monday morning, so she knows which companies are worth a call this week. Gemini Flash reads and drafts; it never decides.

The Cut

The AI never picks the winners. Gemini turns articles into facts it can point to; plain code applies the gates and the score, so every tier traces back to the article. A name that is not in the text is dropped, not guessed.

Humans stay here

- Ananya sends every email herself, from her own Gmail
- She decides who to call; the system ranks and drafts
- A meeting is booked only after the lead says yes

Never lose a lead

- One feed fails → the other eight still run
- No article text → kept, marked headline only
- Gemini limit hit → the next Flash model takes over
- 74 automated tests cover scoring, gates and actions
